

# PowerSchool Version Update: 22.7.0.0

Release Date: 7/28/2022

## New Features and Enhancements

- A Communications tab will be available on the Contact Details page when the Unified Home Communications plugin is enabled. The preferences in this tab will determine the type of communication the contact should receive for a student.
- The *Add optional Vaccine* button has been renamed to *Display Optional Vaccine*.
- The student Vision and Color Screening page is updated and can now be localized.
- The (live side) Copy Master Schedule process will now copy data from 1-to-1 Section extensions from the source year to the target year.
- The Global ID for Students, Teachers, and Administrators is now searchable from the start page. The Field List popup has been updated with the following searches in the Related Searches section:
  - StudentGlobalID
  - AdminGlobalID
  - TeacherGlobalID

## Resolved Issues

- Performance has been improved when importing Oracle Application Express (APEX) content as part of a database restore by removing APEX logging older than 180 days when starting PowerSchool SIS.
- A warning message will now appear when creating a period with the same Start Time and End Time. This is to ensure that Bell Schedule Periods have a duration of at least one minute as expected by various aspects of the system.
- The Submit button on the Edit Availability for Schools and Years page will now function properly when updating details from the Courses page.
- As part of ongoing security improvements, Content Security Policy (CSP) response headers are now present on all browser requests. This **will** impact Customizations and Integrations that load content from third-party/external sites outside of the main PowerSchool SIS address. A new `{{cdn_request}}` plugin.xml attribute has been added for Customizations and Integrations that require content from third-party sites to define external servers that the customization and/or integration will access. This attribute is present in PowerSchool SIS 21.11.0.0 and greater, which is the minimum supported version starting August 15th.
  - Customizations and/or Integrations that utilize external content inside PowerSchool SIS will need to be updated by the issuer.
  - Documentation for the `cdn_request` attribute can be found on the PowerSchool Developer site. The previous link may return a blank page if you are not currently logged into PowerSource.
- Importing enrollment records will no longer fail when a contact's phone number matches that of an existing contact in the SIS but has a different delivery type.
- The Graduation Plan Progress Report Data Capture function now provides more frequent status updates.
- The Graduation Plan Progress no longer errors out when orphaned Student Test records exist
