

# PowerSchool Version Update: 22.11.0.0

---

Release Date: 11/10/2022

## New Featured and Enhancements:

- Wording of the assignment logic has been revised. "No Change" is updated to "Assign to Students without Existing Counselor", and "Replace" is updated to "Replace Existing Counselor".
- Only PowerSchool Mobile App version 22.5.x and higher is supported for use with PowerSchool 22.11.0.0 and above. PowerSchool Mobile App versions older than 22.5.x will generate an error when attempting to connect to PowerSchool 22.11.0.0 and higher.
  - In addition, if you are using Ecollect to view forms, the PowerSchool Mobile App must be upgraded to the same version of PowerSchool SIS 22.11.0.0.
- Teachers can now store comments up to 2000 characters in their personal comment bank.
- In order to improve our products, collect important user feedback, and deliver exceptional user experiences, [Gainsight PX \(Product Experience\)](#) has been added to PowerSchool SIS. Learn more in this [FAQ](#) about the benefits and use of web analytics.

## Resolved Issues:

- The Academic and Career Plans will no longer fail when there are duplicate site names with different locality names in the import file.
- The Day Part Attendance process has been improved to skip schools that fail the Day Part calculation.
- The format of the Attendance Admit Slip has been improved for printing.
- The Nightly Attendance recalculation will now update attendance views after the last day of the school year and before the start of the new year.
- Attendance for remotely enrolled students attending a class will now appear in the Meeting tab of the Attendance Dashboard, while the Daily Attendance tab will only display students from the home school.
- Attendance codes three characters long will no longer overlap in columns on the Class Attendance Audit report when selecting 30 days or less.
- The New Course button on the Courses page will no longer be available when the **Only allow new courses to be created at the District Office** preference is selected.
- The syntax highlighting in Custom Page Manager now works as expected.
- An error will no longer occur when creating a Scheduled System Template from the Data Export Manager.
- The Confirm Delete icon will now display properly on the My Templates and Scheduled System Templates tabs.
- Asset Imports will now display error or success messages instead of failing when bad records exist.
- The Historical Grades page correctly shows the Term Year and Abbreviation when a Stored Grades SchoolID value is from a school other than the student's current school.
- The District Office and External Systems text labels on the Admin Access and Roles now appear correctly based on the user's current locale.
- Importing Language Packs using a delimiter other than comma no longer produces an error.

- The Master Schedule Matrix View will now display the same classes as the Master Schedule List View.
- The Data Restriction Framework (DRF) will now only apply to the incidenttypecode Incident\_lu\_code.CodeType when accessing the Incident\_lu\_code table.
- The **Page to Display When You Sign In** setting is now honored when utilizing OIDC or SAML as an external identity provider.
- Protections have been added to prevent "runaway" Report Engine reports that can cause system stability issues.
- Using the Automated Calendar Setup will no longer cause the following error when clicking Submit: Invalid simple-setting JSON string value.
- The "Modify access privileges for this page" banner will now appear on the Drop Students page when the Access to Page Permissions option has been enabled.
- The Section\_Meeting table has been updated to have a foreign key relationship to the Periods, Cycle\_Day, Section, and Schools table.
- The user will no longer receive an error when editing the security of a staff member assigned the Counselor role when their assigned students have transferred.
- The Schedule This Teacher flag for teachers associated with two schools will remain checked when the teacher's home school is updated.
- The Student header now correctly shows Student information after adding or editing a Daily Attendance record.
- Student Search performance has been improved when Include Remote Enrollments is selected.
- The loading bar now closes as expected when opening the Edit Section page in a new tab from the Teacher Schedule page.
- The course name on the Edit Section page from the Teacher Schedule will now display as plain text. Changes for courses must be done from the Sections page in School Setup.
- A thread-safe issue in the Universal Rostering API will no longer cause bad data for some records when concurrent requests are made.
